Semester and Section: VI Sem CSE B

Batch: 2023-27

Introduction

CampusHub is a centralized web-based platform designed to manage all department and club activities within a college. The system allows departments and student clubs to publish workshops, guest lectures, competitions, and recruitment drives in one place. Students can discover events, register, apply for club recruitments, volunteer for activities, and track their participation history. The platform also generates Entry QR and certificates, creating a digital co-curricular profile for every student.

Module Description

Authentication Module
This module allows users to register and log in to the system. It also supports role-based access for students, club coordinators, and department coordinators. Email verification is included during registration to ensure valid user accounts.

Student Module
This module allows students to browse events, register for events, apply for club recruitments, volunteer for activities, and view their dashboard. The dashboard displays registered events, QR codes for entry into events, recruitment status, volunteering details, and issued certificates.

Club Coordinator Module
This module allows club coordinators to manage club information, create events, open recruitment drives, review student applications, and manage volunteers for club events. They can accept or reject recruitment applications and volunteer requests related to their club.

Department Coordinator Module
This module allows department coordinators to manage department information, create academic events, handle volunteer requests, and issue certificates to participants.

Event Management Module
This module is used to create and manage events by clubs and departments. It stores event title, description, venue, date, deadline, seat limit, and poster details. Students can view these events and register if seats are available.

Recruitment Module
This module is mainly for clubs. It allows clubs to create recruitment forms and students to apply by filling in their interests and details. Coordinators can then review the applications and update the student status.

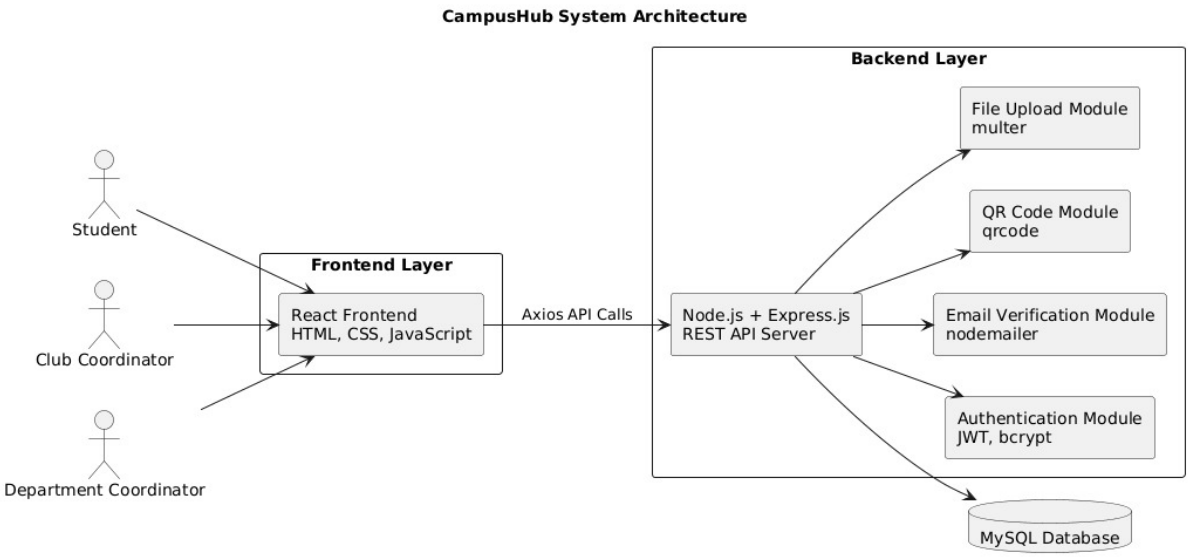
Volunteer Management Module
This module allows students to volunteer for events and lets coordinators manage those requests. Accepted volunteer information is reflected in the coordinator and student dashboards.

Certificate Module
This module allows department coordinators to issue participation certificates to students who attended department events. Students can view the issued certificates in their dashboard.

Technologies Used

- Frontend: React.js, HTML, CSS, JavaScript
- Backend: Node.js, Express.js
- Database: MySQL
- API Communication: Axios
- Database Connectivity: mysql2
- Password Security: bcrypt
- Authentication: JSON Web Token (JWT)
- File Upload: multer
- QR Code Generation: qrcode
- Email Verification: nodemailer
- Middleware: cors
- Development Tool: Nodemon
- API Testing Tool: Postman
- Code Editor: Visual Studio Code

System Architecture



CampusHub follows a three-layer system architecture consisting of the frontend layer, backend layer, and database layer. The frontend is developed using React, HTML, CSS, and JavaScript, and it provides the user interface for students, club coordinators, and department coordinators. The backend is developed using Node.js and Express.js, which handles business logic, API requests, authentication, email verification, QR code generation, and file upload operations. The database layer uses MySQL to store all application data such as users, events, recruitments, volunteer details, registrations, and certificates. The frontend communicates with the backend through API calls, and the backend interacts with the database to retrieve and store information.
